Your Submission

I want to raise some concerns I have in regards to the off shore wind project on the 90 beach. The beach is believed to be the fourth uninterrupted beach in the world. The sandy plains here harbour some of the highest species diversity on the planet, with up to 860 distinct species discovered in just a 10 metre area. It is unspoilt, peaceful, offering residents and visitors a truly unique,

untouched experience. There will be environmental impacts to our waters and coast line, it's unavoidable when doing a large project of this nature. I feel devastated that you want to industrialised this beautiful ecosystem with ugly huge windmills which will ruin the facade of our beautiful coast and possibly ruin tourism and affect the value of our properties. I urge you to think again about what it will do to this area and the impact on residents and tourists alike. To have such a unique environment and want to do this feels just so wrong and sad. I understand the push for renewable energy and the suitability of the area, but people and animals call this place home and I don't think enough time or consideration has been made in regards to renewables and the impact it has of everyday people and our amazing biodiversity in this area. I'm am urging the government to hold off and consider areas that would have far less impact. Regards Nicole Schultz
